ABOUT ME

Hello, I am Abdul Razak, a Full-Stack Software Engineer with a Bachelor of Engineering (S.T.) in Informatics Engineering. I specialize in designing and developing modern, fast, secure, and user-friendly web applications.

My core technical expertise centers on the Next.js ecosystem, React, TypeScript, JavaScript, Tailwind CSS, RESTful API integration, as well as database management using PostgreSQL and MySQL.

I bring proven, hands-on experience developing enterprise-scale operational systems—ranging from the clinical and administrative digitalization of hospital services at RSUD Bintan to regional government agency platforms and independent interactive web applications. Across every project, I consistently prioritize clean code, performance optimization (Core Web Vitals), intuitive UI structure, and long-term system reliability.

As a professional, I thrive working autonomously in remote/WFA workflows, maintain disciplined team coordination, demonstrate agile technical problem-solving, and remain firmly focused on delivering high-quality business and user outcomes.

WORK EXPERIENCE

RSUD Kabupaten Bintan (Bintan Regional Public Hospital)

Technical IT Support & Software Engineer **Mar 2021 – Present**

Held full end-to-end responsibility for web application development, legacy system modernization, clinical system bridging (APIs), and Linux server/database infrastructure management to support round-the-clock healthcare operations and hospital administration at RSUD Kabupaten Bintan.

KEY RESPONSIBILITIES:

- Modernize and engineer the Hospital Management Information System (SIMRS) ecosystem and internal hospital web applications utilizing modern web technologies (React.js, PHP/Laravel, REST APIs).
- Build, configure, and independently administer Linux-based database servers, ensuring 24/7 high availability, stability, and integrity for electronic medical records and clinical transactions.
- Manage cross-platform system integrations (API bridging) connecting SIMRS with external government health services and specialized clinical diagnostic equipment.

KEY PROJECTS & BUILT SYSTEMS:

1. **SIMRS Modernization (Java to React.js) & AI Medical Record Assistant (Auto-Generate S.O.A.P.I.E):** Re-engineered legacy Java-based SIMRS into a modern React.js web application, while training and embedding a dedicated AI clinical assistant to accelerate medical record (CPPT) entry for physicians. The AI was custom-trained to auto-generate clinical note drafts in standard S.O.A.P.I.E format (Subjective, Objective, Assessment, Plan, Implementation, Evaluation) by analyzing longitudinal patient history and adapting to each physician's distinct clinical documentation style.
2. **Full Bridging Integration with BPJS, Laboratory (LIS), & Radiology (PACS):** Successfully integrated SIMRS with BPJS Health Web Services (VClaim & Online Queuing), bridged workflows with the Laboratory Information System (LIS) for automated pathology/lab result reporting, and integrated PACS (Picture Archiving and Communication System) to stream diagnostic radiology imagery directly to physician workstations.
3. **BLUD Internal Financial Management System:** Engineered a tailored financial management application for the Regional Public Service Agency (BLUD) to monitor, record, and reconcile hospital operational budget inflows and expenditures with precision and transparency.
4. **Online Patient Registration Portal:** Designed and deployed an online outpatient appointment booking portal for RSUD Bintan to eliminate counter queues (actively utilized by the public prior to national consolidation into the BPJS Mobile JKN application).
5. **Linux Database Server Architecture & Automated Backups:** Constructed a dedicated database server infrastructure from scratch on Linux, including query optimization routines, secure hospital intranet access controls, and automated daily backup workflows.

Biro Kesra Provinsi Kepulauan Riau (Public Welfare Bureau of Riau Islands Province)

IT Specialist (Contract) **Jan 2020 – Dec 2025**

Appointed as IT Specialist to lead the end-to-end design, development, and ongoing management of the official web portal and information system for the Riau Islands Provincial Government Scholarship Program from 2020 to 2025.

KEY RESPONSIBILITIES:

- Designed and developed a province-scale web application utilizing Next.js, ensuring rapid load times, responsive UI, and high resilience against severe traffic spikes during registration and announcement periods.
- Built and maintained independent Linux-based database infrastructure, including secure digital file storage systems managing tens of thousands of student verification documents.
- Guaranteed technical operational reliability across every annual selection milestone alongside the Bureau's verification committee.

KEY PROJECTS & BUILT SYSTEMS:

1. **Riau Islands Provincial Scholarship Portal (Next.js):** Built a centralized online scholarship platform from the ground up, sustainably serving thousands of higher education applicants across the Riau Islands archipelago over a 5-year tenure (2020–2025).
2. **Digital Document Upload & Verification Management System:** Implemented a secure, structured document ingestion pipeline allowing verification teams to evaluate submissions online without paper-based workflows.
3. **Transparent Selection Pipeline & Live Real-Time Tracking:** Engineered a transparent tracking feature enabling applicants and the public to monitor real-time status across each evaluation milestone—from Initial Registration, Administrative Screening, and On-Site Document Verification, to Final Awardee Announcements.
4. **Linux Server & Database Concurrency Management:** Configured and tuned Linux database servers to maintain uninterrupted stability during high-concurrency traffic surges at application opening and final admissions releases.

Badan Keuangan dan Aset Daerah (BKAD) Kabupaten Bintan

Full-Stack Developer **Jan 2019 – Mar 2021**

Dedicated programmer responsible for designing, building, and managing regional financial web systems and administering internal server infrastructure across the agency.

KEY RESPONSIBILITIES:

- Designed and developed full-stack web applications using PHP and MySQL to digitize administrative workflows and regional public treasury processes.
- Handled routine application deployments, configuration, and proactive maintenance of Windows Server infrastructure.
- Managed database security protocols, scheduled periodic transaction backups, and provided technical support to financial verifiers and department operators.

KEY PROJECTS & BUILT SYSTEMS:

1. **Bintan Regency Centralized SP2D Management & Tracking System:** Engineered a centralized "One-Door" tracking portal for Fund Disbursement Orders (SP2D) used by all regional government units (OPD) in Bintan Regency. Replaced manual physical document handoffs with real-time tracking of submission status, verification reviews, revision logs, and formal SP2D issuance.
2. **BKAD Internal Financial Recording Application:** Developed an internal management information system to record, monitor, and reconcile departmental budget expenditures and operational financial transactions for audit-ready reporting.
3. **Windows Server Infrastructure Management:** Configured and administered on-premise Windows Server production environments ensuring uninterrupted access to internal financial apps across all divisions prior to national consolidation into the Ministry of Home Affairs' SIPD system.

Dinas Koperasi, Usaha Mikro, Perindustrian dan Perdagangan Kabupaten Bintan

IT Support & Web Developer **Jan 2017 – Jan 2019**

Managed day-to-day IT infrastructure operations while designing and maintaining internal departmental information systems and public-facing web portals.

KEY RESPONSIBILITIES:

- Developed, managed, and maintained departmental websites and web applications using PHP and MySQL.
- Handled hardware troubleshooting (PCs, laptops, printers), software installations, and local office network (LAN/Internet) maintenance.
- Supported departmental divisions with database management to ensure well-organized and accurate data reporting for trade, local industries, and micro-enterprises.

KEY PROJECTS & BUILT SYSTEMS:

1. **Industrial Data Recording & Mapping System:** Developed an internal web application to register, map, and compile analytical reports on emerging industries across Bintan Regency, dramatically reducing compilation time compared to legacy spreadsheet methods.
2. **SME & Industry Digital Product Showcase:** Designed and deployed a digital catalog website showcasing products from locally fostered small-and-medium businesses to boost online visibility and market access.
3. **Official Department Profile Website:** Built and maintained the department's public portal for publishing municipal work programs, community updates, and citizen service guidelines prior to government-wide centralization under local SPBE policies.

EDUCATION

Sekolah Tinggi Teknologi Indonesia (STTI) Tanjungpinang

Bachelor of Engineering (S.T.) in Informatics Engineering | May 2013 – Dec 2016

TECHNICAL SKILLS

Frontend: Next.js, React.js, TypeScript, JavaScript (ES6+), Tailwind CSS, CSS3, HTML5

Backend & APIs: PHP (Laravel), Python, Go (Golang), RESTful APIs, System Bridging

Databases: PostgreSQL, MySQL, Database Architecture, Query Optimization

DevOps & Infrastructure: Linux Server Administration, Windows Server, Git, CI/CD
